 $= \sqrt{\int_0^\infty v^2 p(v) dv} = \sqrt{\frac{3\kappa\tau}{m}}$

Ejercicio 3.3.5

la energia interna de un gas esto dada por $E_{int} = \sum_{i=1}^{N} K_{i} + V_{i}$, donde $K_{i} = \sum_{i=1}^{N} K_{i} + V_{i}$

$$E_{int} = \frac{N}{\sum_{i=1}^{N} \overline{X_i}} \times \frac{1}{\sqrt{i}}$$

$$= \frac{N}{N} \cdot \frac{N}{\sqrt{i}}$$

$$= \frac{N}{N} \cdot \frac{1}{\sqrt{i}} \cdot \frac{3KT}{M}$$

$$= \frac{3}{2} \cdot \frac{N}{N} \cdot \frac{3KT}{M}$$

$$= \frac{3}{2} \cdot \frac{N}{N} \cdot \frac{N}{N$$

donde mes la masa de la molécula, Na la constante de Avegadro, n el número de moles, K la constante de Boltenam y T la temperatura.
